COST relative, 1–5

Sections VII and VIII are quoted per project, so they carry no cost row.

●○○○○ BASELINE
●●○○○ STANDARD
●●●○○ MID
●●●●○ HIGH
●●●●● PREMIUM

I Logo Types

Plotter Logo

A flat printed or cut-vinyl logo applied directly to a smooth surface.

Budget-conscious clients or secondary branding — the cheapest option.

COST ●○○○○

Forex Logo

CNC-cut foam letters fixed to a smooth surface — a step up from plotter with real physical edge.

Clients wanting light dimension without the cost of acrylic. Used occasionally, not as standard.

COST ●●○○○

Acrylic Logo

A laser-cut acrylic logo fixed to the wall for a clean, crisp finish — a premium step above forex and plotter.

Sharp, high-end branding that works in one solid tone; limited colour range.

COST ●●●○○

3D MDF Logo

CNC-fabricated lettering with real depth, spray-finished to any colour, for a strong three-dimensional presence.

The most versatile 3D option — richer on colour than acrylic; fabrication takes more time.

COST ●●●○○

Backlit Logo

- Raised 3D MDF lettering illuminated from behind to throw a soft halo onto the wall.
- The most affordable illuminated option — big logos only; avoid for fine lettering.

COST ●●●○○

Inlay Logo

- Illuminated lettering fitted through the wall face, sitting flush and glowing bright.
- Premium finish for big logos and signage — trickier and less effective on small labelling.

COST ●●●●○

Push-Through Logo

- Like an inlay logo but with an added acrylic layer that gives the letters a raised 3D glow.
- Premium territory — strongest on large logos, harder to justify on fine text.

COST ●●●●○

Edge-Lit Acrylic Logo

- A push-through logo capped with a front face so light escapes along the edges for a sharp glowing outline.
- Premium, modern look — best at scale, less so for small labelling.

COST ●●●●○

Front-Lit 3D Logo

- Acrylic cut-out lettering with a chillenium border, lit from the front by dedicated fixtures.
- Bigger logos only — the same technique also produces linear light features, not just logos.

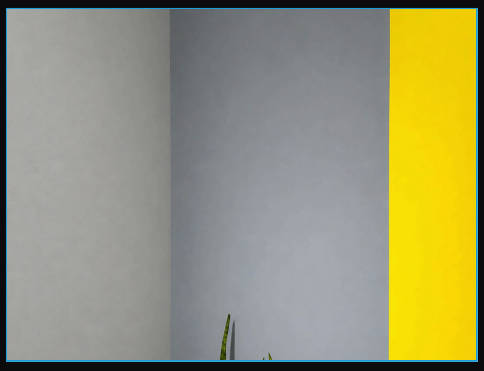
COST ●●●●○

3D Moulding Logo

- Fully-formed acrylic lettering lit from every side — light wraps the entire form.
- True hero moments — the most expensive logo we build.

COST ●●●●●

II Wall Finishes



Painted Wall

A structural wall surface finished with paint; the standard base for most custom exhibition walls, usually roller-applied.

The default wall for any custom stand, in any colour.

COST ●○○○○

Laminate Finish

A decorative sheet finish applied to MDF for a consistent wood, stone or solid-colour appearance.

Durable, uniform surfaces — used mainly on interior and high-touch areas.

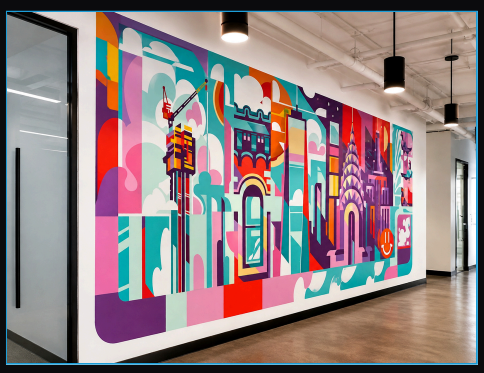
COST ●●○○○

Fluted Panel

A grooved decorative panel that adds vertical texture and a contemporary architectural look; comes in many shapes, colours and sizes.

Feature walls that need a current, architectural feel — a premium decorative panel.

COST ●●●○○



Graphic Walls

A full wall covered in printed graphic — normal graphic vinyl, flex banner wrap or fabric wrap, depending on size.

Big, full-colour brand impact per dirham; campaign imagery.

COST ●●○○○

Mixed Decorative Panels

Bespoke themed panelling arranged around the stand to suit the concept; comes in standardised sizes.

Themed builds needing decorative variety across the walls.

COST ●●●○○

Artificial Greenery

Artificial plant or foliage panels used to create a green-wall or natural visual finish.

Wellness, sustainability or natural themes; strong photo-moment walls.

COST ●●●○○

III Paint Finishes

Roller Paint

The cheapest form of painting, applied by roller — mainly on large surfaces like walls, but usable on counters too.

Large wall areas and any budget-led paint job.

COST ●○○○○

Matte Spray Paint

A low-reflection spray finish giving a smooth, modern, understated appearance.

High-end joinery — counters, kiosks, podiums — where no glare is wanted.

COST ●●●○○

Satin Spray Paint

A lightly reflective spray finish between matte and gloss, easier to clean.

High-end joinery that must stay presentable through the show.

COST ●●●○○

Gloss Spray Paint

A high-shine spray finish that reflects light for a sleek, polished appearance.

Statement joinery and bold brand colours meant to pop; shows every prep defect.

COST ●●●●○

Textured Paint

A paint system that creates a tactile surface — sand, stone or rough-plaster effects — in a range of texture types.

Organic, crafted looks; hides panel joints well.

COST ●●●○○

IV Flooring Finishes

Exhibition Carpet

A practical temporary carpet in multiple colours, laid on raised flooring or directly on the hall floor.

Standard stand flooring — fastest and most economical.

COST ●○○○○

Melamine Flooring

The standard exhibition floor — a film-faced board in various colours and finishes, laid on raised flooring.

The default raised floor for most stands.

COST ●●○○○

PVC Flooring

A durable sheet flooring offered in solid, wood, stone and other printed finishes.

Heavy footfall and clean, modern floors.

COST ●●○○○

Laminate Flooring

Interlocking boards that provide a more substantial wood or decorative floor appearance.

Hospitality zones where the floor should feel real underfoot.

COST ●●●○○

Vinyl Flooring

Custom-printed floor vinyl used for graphics, patterns, wayfinding or branded surfaces.

Floor-level branding, zoning and wayfinding moments.

COST ●●●○○

Artificial Grass

Synthetic turf used to create outdoor, sports, landscaping or natural-themed finishes.

Sports, outdoor and landscape concepts — instant theme.

COST ●●○○○

v Lighting

Downlight

ⓘ The classic exhibition light, in various sizes, body colours and temperatures (Kelvin).

→ General stand brightness — the workhorse fixture.

COST ●○○○○

Spotlight

ⓘ A focused light in various shapes, body colours and temperatures, used to highlight products or features.

→ Product plinths and anything that must draw the eye.

COST ●●○○○

Track Light

ⓘ Adjustable spotlights on a track allowing flexible direction; a more modern focus light.

→ Product walls and layouts that may change on-site.

COST ●●○○○

LED Strip

ⓘ A slim linear light within shelves, counters, edges and architectural details, in various colours and temperatures.

→ Adding depth and detail on a budget.

COST ●○○○○

Top-Lit Acrylic

Lighting positioned behind an acrylic panel to make it glow.

Illuminated panels, counters and feature surfaces.

COST ●●●○○

Hanging Light

A decorative light suspended from above, in various designs, often over counters or seating.

Hospitality and meeting areas wanting a considered, residential feel.

COST ●●○○○

VI Graphic & Print Finishes

Printed Vinyl Graphic

A full-colour adhesive print used for wall graphics, branding and large visual applications.

The workhorse — large imagery at economical cost.

COST ●○○○○

Frosted Vinyl

A translucent film on glass or acrylic that creates privacy and a sandblasted appearance.

Meeting-room glass and privacy that still passes light.

COST ●●○○○

Lightbox

A translucent print illuminated from behind for brighter, more prominent branding.

Key visuals that must dominate; darker hall positions.

COST ●●●○○

VII AV & Digital Display

LED Television

- A flat LED TV screen for presentations, videos and promotional content.
- Straightforward on-stand video and messaging.

LED Wall

- A seamless large-format LED display assembled from modular panels.
- Big, high-impact video and hero brand moments.

Curved LED Wall

- A curved LED display for immersive or wrap-around visual experiences.
- Immersive feature walls and standout centrepieces.

L-Shape / Corner LED Wall

- LED panels joined around a corner to create an L-shaped display.
- Corner stands and dual-facing visibility.

Interactive Touchscreen

- A touch-enabled screen for interactive presentations, catalogues and engagement.
- Self-guided product browsing and lead capture.

VIII Other Technology

Virtual-Reality Activation

- An immersive experience viewed through a VR headset with interactive controls.
- Product demos and experiences impossible to stage physically.

Gesture-Control Screen

- A screen that responds to hand gestures without physical touch.
- Hygienic, futuristic interaction that draws a crowd.

Augmented-Reality Activation

- Overlays digital content onto the real environment through a phone, tablet or AR device.
- Bringing products or data to life in the visitor's own space.

Gaming Simulator

- A branded racing or gaming setup with physical controls, scoring and customised content.
- Dwell time and competitive crowd-pulling engagement.

Digital Registration System

A digital check-in system for registration, data capture, badge printing and lead retrieval.

Managing entry and capturing leads at scale.

Interactive LED Floor

A responsive LED floor that reacts to movement, touch or programmed content.

Immersive, playful floor-level engagement.

AI Sketcher

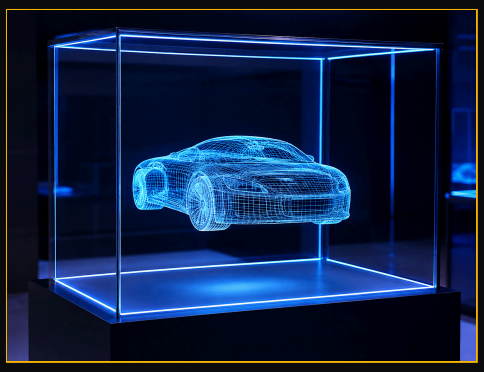
A robotic drawing unit that creates a line portrait of the visitor as a personalised giveaway.

A memorable, shareable personalised takeaway.

AI Hologram Avatar

An interactive AI character that answers questions, customisable in appearance, language and content.

On-brand concierge and always-on engagement.



Holographic Product Display

An enclosed transparent display that makes products, models or animations appear to float in 3D.

Showcasing a hero product with maximum drama.

Robotic Interactive Hub

Robotic arms combined with screens and sensors let visitors explore information or physical models.

High-tech brand statements and interactive demos.

Smart Object-Recognition Table

A touch table that detects physical objects or pucks and displays linked information and media around them.

Layered product storytelling on a shared surface.

Transparent OLED Display

A transparent touch display that overlays digital content while keeping visibility through the screen.

Product cases and windows that double as screens.

Touch Video Wall

- A large interactive display wall for browsing videos, timelines, products and layered information.
- Deep self-guided content in a bold format.

Motion-Sensor Interactive Wall

- An LED or digital wall that reacts to visitor movement and touch to create dynamic effects.
- Eye-catching motion that pulls people in from the aisle.

360° Photo / Video Booth

- A rotating camera platform that creates branded slow-motion and 360-degree social content.
- Social-media reach and shareable visitor content.

Robotic Activation

- A programmable robotic unit for greeting, guiding, demonstrations or interactive engagement.
- A show-stopping welcome and crowd draw.
